Art Unit: 1732

1.At page 22, line 26 of the instant specification, there is a reference to a copending application which requires a serial number.

- 2. Claims 18 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14, 21 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over British Patent Application 2,326,727 in view of PCT Publication WO98/04651 (see page 16, lines 5-6 and 17-36).

British –727 is applied for reasons of record, the primary reference failing to teach that the polarization rotator element is a film since the substrate onto which the layers are formed is made of glass. However, PCT –651 discloses making optical retardation films wherein alignment layers and liquid crystal materials are formed on a substrate, and such substrate is taught as being either glass or a plastic, with the plastic substrate itself being the alignment layer. Obviously, British –727 and PCT –651 are directed to making optical films and while the film of PCT-651 may not be a polarization rotator, it comprises a film that would be used in a polarization rotator, and hence one of ordinary skill in this art would have knowledge of how to make same—ie, the references are considered to be analogous art in every sense. It would have been obvious to one of

Application/Control Number: 09/965,417

Art Unit: 1732

ordinary skill in the art at the time of invention to have modified the method of the primary reference by using a film substrate as taught in PCT –651 for a more lightweight, flexible polarization rotator.

4. Claims 15-17, 20 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over British Patent Application 2,326,727 in view of British patent Application 2,324,881 and PCT Publication WO98/04651 essentially for reasons of record as set forth in paragraph 7 of the previous action and paragraph 3, supra.

5. Applicant's arguments with respect to the claims have been considered but are most in view of the new ground(s) of rejection.

Applicant has amended the claims to recite the formation of a film. Taken in combination with PCT –651, the British references previously applied against the claims render this as obvious. Clearly, PCT –651 recognizes the advantages in using a flexible, film substrate over a glass substrate when making a retardation film and one of ordinary skill in this art would recognize that the same advantages would be realized when making a polarization rotator.

6.Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Application/Control Number: 09/965,417

Art Unit: 1732

Page 4

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mathieu D. Vargot whose telephone number is 571 272-1211. The examiner can normally be reached on Mon-Fri from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Colaianni, can be reached on 571 272-1196. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
